

Java

```
class Solution {  
    public int[] anagramMappings(int[] nums1, int[] nums2) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number[]} nums1  
 * @param {number[]} nums2  
 * @return {number[]}  
 */  
var anagramMappings = function(nums1, nums2) {  
  
};
```

TypeScript

```
function anagramMappings(nums1: number[], nums2: number[]): number[] {  
  
};
```

C++

```
class Solution {
```

```
public:
    vector<int> anagramMappings(vector<int>& nums1, vector<int>& nums2) {

    }
};
```

C#

```
public class Solution {
    public int[] AnagramMappings(int[] nums1, int[] nums2) {

    }
}
```

Kotlin

```
class Solution {
    fun anagramMappings(nums1: IntArray, nums2: IntArray): IntArray {

    }
}
```

Go

```
func anagramMappings(nums1 []int, nums2 []int) []int {

}
```
